

*FLC MEMBRANE  
Odor Control Cover*

- The FLC MEMBRANE covers are custom designed to minimize odors and gaseous pollutants, and avoid evaporation and diffusion into the atmosphere caused by wind action;
- The covers are made with flexible sheets of closed cell poly-ethylene foam that is resistant to acids and weathering.
- These covers are installed on existing and new construction tanks of any size and shape;
- The FLC MEMBRANE covers are installed in a special way to stay constantly stretched on the surface of the slurry, even in the case of variable liquid level in the tank.

# FLC MEMBRANE

*These covers capture most of the gas fumes odors by eliminating evaporation and diffusion into the atmosphere.*

*University research indicates that FLC MEMBRANES cut up to 98% of the ammonia gaseous emissions from slurry.*
